Projects

1. Scrapp

   Scrapp is a scrap management website where users are able to sell their household scrap over the Internet which when fully implemented will enable pickup ar their homes.
   Source code - http://github.com/deekeh/scrapp

2. BootSearch

   Bootsearch is a sample website for searching various Bootstrap classes available on the site. It mainly focuses on implementing a simple sorting algorithm to sort the classes.
   Source code - http://github.com/deekeh/bootsearch

3. StudyCampus

   The studycampus website is an online courses website. In addition to the typical courses websites, the application tracks the pauses a user performs on the video, asks her if she finds the topic difficult to understand and fetches relevant links on her dashboard.
